

WHY WAIT?

YOU CAN HAVE YOUR NEW SMILE TODAY WITH CEREC!

WHAT USED TO TAKE WEEKS, CAN NOW TAKE JUST A FEW HOURS!

WHAT IS CEREC?

CEREC stands for **Chairside Economical Restoration of Esthetic Crowns**.

CEREC is cutting-edge technology that uses computers and digital images to scan, design, and then actually create your new crown **right in our office** while you get to relax and read a magazine.

HERE'S HOW IT'S DONE:

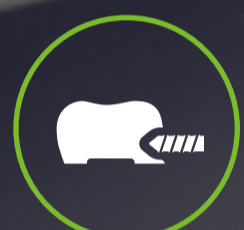

Step 1

A digital wand is used to take an image of the damaged tooth.

Step 2

These images are used to create a digital design for the new crown.

Step 3

The digital design is wirelessly transferred to a machine in the office that mills the crown out of a porcelain block.

Step 4

The new crown is stained and glazed and then inserted and permanently cemented to repair the damaged tooth.

Step 5

Smile! You can leave our office that day with your new crown!

WHY WE KNOW YOU'RE GOING TO WANT A CEREC CROWN:

You get your new smile today!
What's better than instant gratification?

Saves time!
You won't need multiple appointments.

No temporary crowns or waiting
for a laboratory to fabricate the permanent restoration.

It's all digital!
You can watch us design and fabricate the crown while you wait.

PLUS: They will look and feel like your own teeth!

With CEREC technology, we offer high-end professional quality dental solutions in-house and on-demand.
